"The User Friendly ICF"

TECHNICAL REVIEW

BRICK SUPPORT

IntegraSpec's brickledge is new to the lineup as of 2001. The panel is designed to provide 4" brick support and is engineered for up to 28' of brick.

Advantages:

- Easy to install with the assembly of the wall. Ledge is insulated and provides a slip for frost protection. Wasted is greatly reduced cutting only one panel.

Pre-engineered 4" x 4" x 1/4" angle iron installation using specially designed anchor bolts embedded into the concrete. EPS is installed under the angle iron to protect from frost.

Advantages:

- Brick can be installed as an after thought and still be structurally sound.
- Fast installation, energy efficient.

Starter block can be applied for the first and/or second row to give additional height to allow for minimum grade restrictions or hide ledge below grade.

Advantage:

- Flexibility for grade heights.
- Minimal parging.
